Acoustic Calibrators

Is my result correct? The only way to be sure that you can answer 'yes' to this questions is to perform an acoustic calibration using a calibrator that fully conforms to current standards. The norms and standards impose the requirement to calibrate the measurement channel before each measurement or measurement session and after the measurement as well for result verification purposes. If you don't perform these basics checks then what do your results actually mean? An acoustic calibrator is a device which produces an acoustic pressure of defined level and frequency. In other words, an acoustic calibrator is a template of acoustic pressure. With the help of such a reference template we can check the accuracy of the measurements performed with the sound level meter and adjust it if a drift error in sensitivity is indicated.

The accuracy of acoustic calibrators used for the calibration of the measurement path should match the class of sound level meter. Depending on the instrument's performance Class 1 or Class 2 calibrators are used. A sound level meter is calibrated correctly only if the measurement error is within the allowed range of tolerance defined by the standards for the meter of a given class (defined by IEC 61672: 2002).

Unlike many others, the Svantek calibrators feature a robust housing that gives the comfort of a secure grip to the user. The interior design of our acoustic calibrators is based on the reference microphone and microprocessor controlled signal source including digital static pressure and temperature compensation. Due to the feedback regulation control loop our calibrators do not require any adjustments by the user and operate over a wide range of ambient temperature and humidity assuring excellent stability of the calibration levels and their frequency.

Each acoustic calibrator is provided with a statement of the calibration which allows the user to be certain that their instruments will measure correctly.

Features

- SV 35A & SV 33A class 1 sound calibrators meeting IEC 60942:2003
- SV 34A class 2 sound calibrator meeting IEC 60942:2003
- Frequency 1 kHz
- 94 dB or 114 dB levels (SV 35A)
- 114 dB level (SV 33A, SV 34A)
- Built-in reference microphone
- Microphone presence detection (SV 35A)
- Built-in temperature and static pressure compensation
- Automatic power on/off (SV 35A)
- Automatic power off (SV 33A, SV 34A)
- Dimensions 65 x 65 x 70 mm
- Robust housing
